Security 2
Mailing Lists 2
Timed Applications 2

Web Demo

Develop pages on the site to allow anyone to login, modify (maybe), add users, groups, memberships, view stats, create pages, content…

Web Signup For New Sites

Develop pages on the site to allow a new customer to choose template and begin loading data for their new site. New pricing would be less than current build from scratch.

Web Support

Allow the user to report errors or upgrades thru web support.

Discount For Referrals

Discount current client's future purchases when they refer a new client. Maybe 10%?

Dynamic Content

Allow the user to create pages by using a common page with a unique QueryString.
Allow the user to create pages by copying standard template files that call a function passing the filename.
Allow the user to the date and time range for content to be displayed on the page.

Photo Albums

Add thumbnail file
Allow the user to choose page format (2, 3, 4 photos across)
Use popup and << or >> scroll buttons using Java.

Security

Finish User config.
Finish Group membership.
Logging/Statistics
Develop more reports (with filtering). Allow user to click deeper into details to see a single session's activity.
Develop Logging and security to view activity.

Mailing Lists

Allow visitors to add/remove themselves from mailing lists.
Allow user to add/disable/change/delete membership.
Allow user to view membership report (maybe).
Allow user to view log of emails sent.

Timed Applications

Develop based on Session_Start, redirecting to timed page (with Loading… screen), then to requested page.
